

Instruction for 3DES Worker Node

Installing

1. Install [Docker Compose](#),
2. Download archive for your OS:
 - [Windows](#),
 - [MacOS or Linux](#),
3. Sign Up at [3DES](#) site.

Launch on MacOS or Linux

1. Extract files from archive,
2. Make file `start_worker_macOS_linux.sh` executable,
3. Execute file `start_worker_macOS_linux.sh`,

You can use following commands in your terminal to do it:

```
cd path/to/extracted_archive/docker/  
chmod +x start_worker_macOS_linux.sh  
./start_worker_macOS_linux.sh
```

Launch on Windows

Launch file `mvp_worker_container/docker/start_worker_windows.bat` with administrator privilege.

Access to interface

To get access to your worker interface you need to go to <http://127.0.0.1:5000>

Shut down the worker node

To stop worker node use the following command (from directory with file `docker-compose.yml`): **`docker-compose down`**

User changing

To change user (after getting new credentials) you need to edit file **.env**: edit *LOGIN* and *PASS* parameters and then reload client by stopping and running worker.
